## Direct Products 1

## General rules

(a) For point groups in the lists below that have representations $A, B, E, T$ without subscripts, read $A_{1}=A_{2}=A$, etc.
(b)

|  | g | u |
| :---: | :---: | :---: |
| g | g | u |
| u |  | g |

|  | $\prime$ | $\prime \prime$ |
| :---: | :---: | :---: |
| $\prime \prime$ | $\prime$ | $\prime \prime$ |
| $\prime \prime$ |  | $\prime$ |

(c) Square brackets [ ] are used to indicate the representation spanned by the antisymmetrized product of a degenerate representation with itself.

## Examples

For $D_{3 h} \mathrm{E}^{\prime} \times \mathrm{E}^{\prime \prime} \quad \mathrm{A}_{1}^{\prime \prime}+\mathrm{A}_{2}^{\prime \prime}+\mathrm{E}$
For $D_{6 \mathrm{~h}} E_{1 \mathrm{~g}} \times E_{2 \mathrm{~g}}=2 B_{\mathrm{g}}+E_{1 \mathrm{~g}}$.
